

HITRUST Training for Practitioners

HITRUST offers the only training course designed specifically for healthcare information security professionals to prepare them for the evolving compliance landscape shaped by HITECH, HIPAA, CMS and various other federal, state and business requirements.

HITRUST Training for Practitioners educates healthcare security professionals about information protection in the healthcare industry and the utilization of the HITRUST Common Security Framework (CSF) to manage risk. Participants will develop the skills necessary to implement policies, procedures and technical controls for the purpose of attaining HITRUST certification. The course is recommended for any security professional from a healthcare organization planning to implement the CSF. This course is also required for individuals working as part of a **CSF Assessor** organization who wishes to provide HITRUST and CSF related services. Attendees must pass the Practitioner Exam delivered on the final day of the course in order to become practitioner certified.

The course includes two modules:

Module 1: Understanding the Healthcare Landscape and Critical Security Risks

Topics include:

- Introduction to HITRUST and the Common Security Framework (CSF)
- Overview of the healthcare industry including key players and how they interconnect
- Analysis and discussion of trends in the healthcare industry as they relate to privacy and security (e.g., challenges and constraints, top concerns, where organizations are focusing their initiatives)
- Overview of the regulatory landscape that affects healthcare organizations (e.g., compliance agencies, standards, regulations)
- Discussion on the history of privacy, why it is important, trends looking forward, and how it affects the security organization in the healthcare industry.
- Analysis of the top threats and breaches of PHI affecting healthcare organizations and relating this to risks and controls

Module 2 : Utilizing the CSF and CSF Assurance Program

Topics include:

- A detailed review of the structure of the CSF, including the control objectives, multiple levels of implementation requirements, risk factors and authoritative sources cross referenced
 - Introduction and overview to the CSF Assurance Program as a means of managing and communicating security internally and with third parties (e.g., business associates, customers, vendors)
 - Explanation of the difference between CSF Validated and CSF Certified and the value to an organization
 - Introduction and overview of the tools and methodology for utilizing the CSF
 - Discussion of best practices for adopting the CSF and performing an assessment
 - A review of the requirements for CSF Certification
-

Duration

5 days

Cost*

\$3,000/ individual
