

HITRUST® acknowledges the importance of organizations' HITRUST CSF® Certification status to their customers and stakeholders. As the gold standard in providing assurances for the protection of sensitive information, a HITRUST CSF Certification is a significant accomplishment for any organization.

We recognize the challenges that assessed entities may be facing in completing their HITRUST CSF Validated Assessments and the subsequent possible impact of not maintaining HITRUST CSF Certification. The HITRUST CSF® Assurance Program, upon which certification is based, incorporates a number of mechanisms to ensure the assurances provided by a HITRUST CSF Validated Report are 'rely-able' when the report is issued, and remain 'rely-able' up until the time a report expires. The new HITRUST CSF Bridge Assessment provides a solution to assist organizations in addressing these challenges, allowing assessed entities to demonstrate a continued level of control effectiveness and assert continued progress towards the next HITRUST CSF Validated Assessment.

What is the HITRUST CSF Bridge Assessment?

A HITRUST CSF Bridge Assessment allows organizations to maintain a form of HITRUST CSF Certification status for an additional 90 days even if their validated assessment submission due date is missed. A HITRUST CSF Bridge Assessment results in a HITRUST CSF Bridge Certificate.

The HITRUST CSF Bridge Assessment is:

- A forward-looking, temporary certificate issued by HITRUST.
- Valid for 90 days from the expiration date of the organization's previous HITRUST CSF Certification.
- A letter meant to accompany the previous/expired HITRUST CSF Certification report.
- A means for the organization to demonstrate that:
 - The scoped control environment is unlikely to have degraded since the expiration of the prior certification,
 - The scoped control environment is unlikely to degrade significantly for the duration of this Certificate, and
 - It intends to complete the next HITRUST CSF Certification effort (same scope of services).

The HITRUST CSF Bridge Assessment is not:

- An extension to the organization's existing certification (which still expires on the two-year certification anniversary), or
- A replacement for a traditional HITRUST CSF Certification (as it does not provide an equivalent level of assurance).

What Organizations are Eligible for the HITRUST CSF Bridge Assessment?

A HITRUST CSF Bridge Assessment is only for organizations that currently hold an active HITRUST CSF Validated Report with Certification, are likely to miss their validation submission due date, and haven't already missed that due date by greater than 30 days.

What is the Process?

1. The qualifying organization obtains a HITRUST CSF Bridge Assessment object by contacting their HITRUST Customer Success Manager.
2. A HITRUST Authorized External Assessor tests 19 requirement statements selected by the HITRUST MyCSF® platform.
 - a. If a validated assessment effort is already underway, many or all of these may have already been tested.
 - b. These tests can be included in the delayed validated assessment without needing to be reperformed (i.e., HITRUST will not require re-testing of these 19 requirement statements).
3. The organization's management represents (and the External Assessor must agree) that:
 - a. No reportable breaches have occurred in the scoped control environment since the previous HITRUST CSF Certification was issued,
 - b. No significant changes in the scoped control environment have occurred since the previous HITRUST CSF Certification was issued, and
 - c. The assessed entity intends to complete a full validated assessment prior to the expiration of the HITRUST CSF Bridge Certificate.
4. HITRUST performs a fast-tracked Quality Assurance review of the External Assessor's testing.
5. HITRUST issues the HITRUST CSF Bridge Certificate.
6. The organization then submits their completed validated assessment to HITRUST before the HITRUST CSF Bridge Certificate expires (i.e., no later than 90 days after the previous certification's expiration).
 - a. The 90 days covered by the HITRUST CSF Bridge Certificate are deducted from the new HITRUST CSF Certification's 24-month validity period.
